Appendix 5

- Page A5.7, last paragraph: Replaced last paragraph with “In cases when there is more than one eligible child of the same mother/caretaker, complete all the questionnaires for the mother/caretaker and then weigh and measure her/his children. If there is more than one eligible child and more than one mother/caretaker, you should be careful about the timing of the measurements, and use your judgement in such cases. If you think that leaving all of the measurements until after the completion of all questionnaires will cause confusion and errors, then you must carry out measurements of children by the same mother/caretaker once the questionnaires administered to that mother/caretaker have been completed, and then move on to the next mother/caretaker. However, in reality, it is often the case that interviewing all mothers/caretakers first and measuring all children at the end is more practical – use this option if you are sure that this will not cause confusion.”
